Vast Cyber-Security Enthusiast with experience in setting up and managing servers. I have a multi-purpose home lab with VMWARE ESXi and a variety of virtual machines running. Dedicated junior IT support professional with multiple experiences in the field while being able to manage all server operating systems including VMWARE and Docker.

My Experiences

CYBERPANEL   AUGUST 2022

- Installed Cyberpanel on a docker container on a separate VNET and configured the mail domain and reverse proxies.

- Integrated a VPS as a proxy for a CyberPanel web server to get a static IP.

HOME LAB   JUNE 2022

- Purchased and Deployed Dell PowerEdge Servers in my home lab.

- Installed and Configured ESXi 6.7 on a Dell Server, set up the host, networking, and storage

- Installed a Docker host on a Dell Server and configured container hosts and networking

LINUX   JANUARY 2020

- Successfully resolved numerous issues with Linux configuration files, resulting in a significant reduction in server downtime

- Administered over 30 distinct Linux environments, skillfully troubleshooting and resolving issues related to installation, configuration, and networking.

Professional Experience

- I successfully identified, exploited, and reported numerous vulnerabilities in servers running Python, Java, and PHP, helping to improve the security of these systems.

- I skillfully exploited vulnerabilities in Apache servers, successfully executing Remote Code Execution (RCE) to demonstrate the potential risks

- I contributed to the improvement of Java-based frameworks, successfully identifying and fixing security flaws in many systems.
